Further installation examples

Calculations of running track length

The length of the running track must be shorter than the diagonal clearance (P2) by at least 80 mm (3 5/32").

LMB = inside clearance
 LMH = inside height
 STB = sliding door width
 P2 = diagonal clearance
 LS = running track

Calculations of door width

The following factors affect the calculation of the width of the sliding door:

- Open or closed guide groove
- Construction with or without spring stop (25370)

Facing for the retainer profile

The optional clip-on panel made of aluminum can be clipped onto the retainer profile without additional fixing components. For invisible fastening of the lintel panelling, there is the option of covering the clip panel on site, using panels up to 40 mm (1 9/16") thick.

Spring stop

The specially developed spring stop for ejecting the door is integrated into the running track without visible fittings on the door edge.

Version with 20 mm (25/32") longer hanger bolt

Thanks to the set with a longer hanger bolt, the running track can be covered from below, using removable ceiling elements.

Ceiling integration

Recommendation: For systems integrated into the ceiling, provide assembly openings or front access to the system – front access of SoftMove is always mandatory.

SoftMove 100 magnetic soft closing mechanism

Completely integrated into the running track, the SoftMove 100 decelerates sliding doors and draws them into their final position.
